

Converting Electronic Documents to TIFF or PDF for Archiving in EMC Documentum® ApplicationXtender®

Imager Folder-2-Folder (F2F)[™] Batch Converter is a high volume document conversion solution that integrates seamlessly with EMC's Documentum® ApplicationXtender® allowing users to convert any electronic document to TIFF or PDF for subsequent archiving and retrieval.

Integrating Imager F2F[™] with ApplicationXtender®

Imager F2F[™] is a complete solution for high volume, mission-critical conversion projects. It is easy to install, operate, and interfaces seamlessly with ApplicationXtender® as shown in Figure 1.

Within the client application, a user selects documents that are to be archived in ApplicationXtender®. An automated process then sends the documents to both the F2F[™] In Folder and F2F[™] Out Folder.

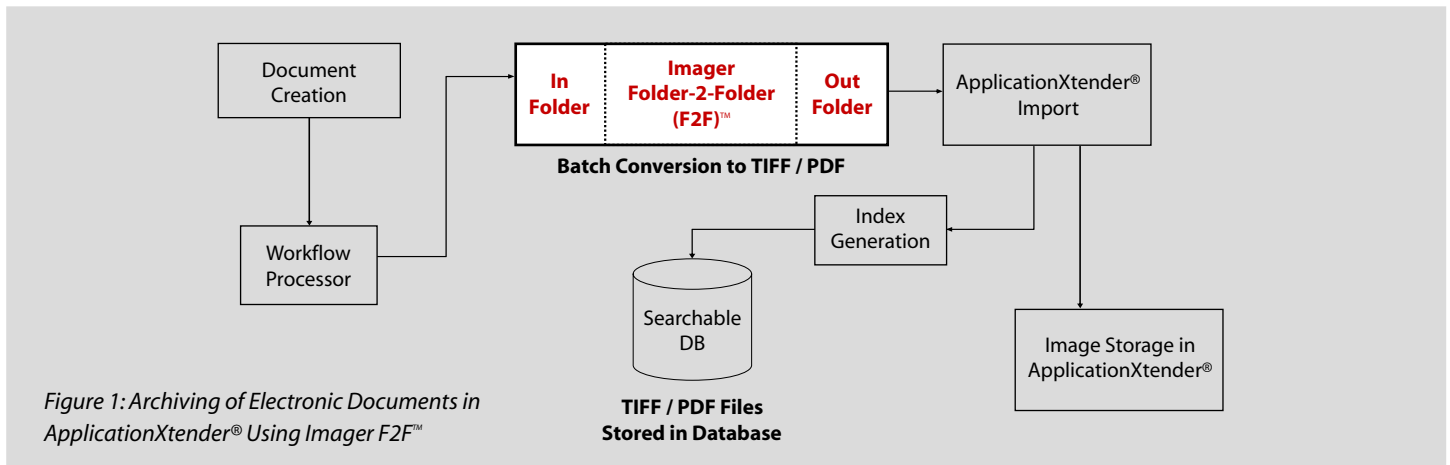

F2F[™] converts the documents into TIFF or PDF according to user defined settings. Once converted, these documents are placed in the F2F[™] Out Folder.

The ApplicationXtender® import process performs two tasks. First it creates the index information from the documents and stores them in the RDBMS so they can be easily searched. Second, it archives the image files in ApplicationXtender® so they can be easily retrieved.

Imager F2F[™] runs as a service so you can automate the entire conversion process using a shared In Folder which is continuously polled by Imager F2F[™].

Batch Conversion for ApplicationXtender®

Imager F2F[™] is designed to support batch conversion of electronic documents to TIFF and PDF so that such a conversion can be handled efficiently by the ApplicationXtender® import process. The seamless integration of Imager F2F[™] with ApplicationXtender® allows for rapid conversion, creation of high quality image files and intuitive use.

Convert to TIFF or PDF for ApplicationXtender®

For many ApplicationXtender® users TIFF is the preferred document storage format. Imager F2F™ can rapidly convert any electronic document to a high quality TIFF image for archiving.

Many customers also prefer to archive electronic documents in PDF format. F2F™ rapidly converts any electronic document to PDF.

ApplicationXtender® Users Implementing Imager Technology

ApplicationXtender® users rely on Imager F2F™ to convert a variety of electronic documents to TIFF or PDF for archiving in ApplicationXtender®. While these documents may be generated by a variety of business groups across multiple functional responsibilities, each is converted to TIFF or PDF image of the highest quality to ensure optimal archiving and retrieval in Documentum ApplicationXtender®.

Why integrate Imager F2F™ with ApplicationXtender®?

Imager F2F™ has been developed with ApplicationXtender users in mind in order to deliver a solution that addresses their specific needs. In doing this, we believe that the following are the primary benefits of Imager F2F™:

Ease of Integration and Use with ApplicationXtender® – ApplicationXtender® users who have licensed Imager F2F™ are emphatic that its ease of integration and use were the two biggest reasons they chose this solution.

Reliability – Imager F2F™ is based on Imager's core document conversion technology that has been rigorously tested by many of the world's leading technology companies and is considered to be the most reliable document conversion technology in the world.

Customization – Imager F2F™ can be customized to meet the specified needs of any ApplicationXtender® user.

Compatible File Formats – Imager F2F™ supports any file format, including Word®, Excel®, PowerPoint® and many more.

Speed and Imager Quality – The design of Imager F2F™ and its use of Imager's core conversion technology allow for rapid document conversion to create image files of superior quality.

Support – Imager fully supports Imager F2F™ and can provide complete support to customers who expect superior service.

About Imager

Imager is a Division of Metasoft Systems Inc. (Metasoft) which is a Branham Top 100 Private Software Company that has extensively sold image and document conversion software to many of the world's leading technology firms. Metasoft's proprietary technology has an estimated installed base of 55 million users worldwide.
